Solution design may take on both non-automated solutions (like adding more people to the business area or redesigning the manual process) or automated solutions (creating a mobile app to allow people to order takeout food from a restaurant, for example). One technique you can use to create the design area scope is a use case diagram.

Solution architecture is a structural design that addresses a set of functional and non-functional requirements. Generally speaking, solution architecture is immediately implemented as a program, project or change. This differs from enterprise architecture that may include long term roadmaps that take many years to implement. The following are illustrative examples of solution architecture.
