Generative design is a revolutionary new  
method of creating artwork, models, and  
animations from sets of rules, or  
algorithms. By using accessible  
programming languages such as  
Processing, artists and designers are  
producing extravagant, crystalline  
structures that can form the basis of  
anything from patterned textiles and  
typography to lighting, scientific diagrams,  
sculptures, films, and even fantastical  
buildings.

A great book on generative design or creative coding. It serves well as introduction to the java-based language/library Processing, with which all examples in the book have been produced. The book features an interesting mix of different kinds of visualizations including 2D and 3D animations, Agent-based automation, particle systems, image manipulation, color, visualization of text and data.
