~~CHAPTER 1 – PROBLEM SOLUTIONS~~

Solutions Day 1 Problem1. Let Z be the set of integers. Determine all functions $f: Z \rightarrow Z$ such that, for all integers a and b , $f(2a) + 2f(b) = f(f(a) + b)$. (1) (South Africa) Answer: The solutions are $f(n) = 0$ and $f(n) = 2n \cdot K$ for any constant $K \in Z$. Common remarks. Most solutions to this problem first prove that f must be linear, before

Problems: Maximum Value Contiguous Subsequence. Given a sequence of n real numbers $A(1) \dots A(n)$, determine a contiguous subsequence $A(i) \dots A(j)$ for which the sum of elements in the subsequence is maximized. Making Change. You are given n types of coin denominations of values $v(1) v(2) \dots v(n)$ (all integers).

Solution: Using the superposition principle, the force on q_3 is $13 \hat{i} + 23 \hat{j} + 31 \hat{k}$ N. In this case the second term will have a negative coefficient, since \hat{j} is negative. The unit vectors \hat{i} and \hat{j} do not point in the same directions. In order to compute this sum,
