The Ecological Approach to Visual Perception We obtain a better notion of the structure of ambient light when we think of it as divided and subdivided into component parts. For the terrestrial environment, the sky-earth contrast divides the unbounded spherical world into two hemispheres, the upper being brighter than the lower.

In vision, this emphasis on the interdependence between a real agent and its environment is often referred to as the Ecological Approach to Visual Perception, as coined by JJ Gibson in his 1979 book with the same title. The goal of this course is to concretely explore this general perspective of an agent in its environment.
